

LangChain 

Action Plan Generation

Action Plan Generation involves devising a set of tasks the model should execute to fulfill a specific requirement or goal. It's like an AI to-do list.

Orange Prune Rice

Orange juice with cinnamon is a wonderful combination, especially with the prunes. It sounds sweet but it's more savoury than you might expect. You can serve it with a salad or other veggies; I used broccoli.

4-5 portions	350 g	Rice Basmati	300 ml	Orange juice
	3-4	Carrots	1/2 TBL sp.	Cinnamon
	250 g	Cashews	300 ml	Vegetable stock
	150 g	Prunes (dried plums)	1	Onion red
	1	Broccoli		

10 mins

- Dice onion
- Cut prunes into small pieces
- Cut carrots into slices
- Cut broccoli (while cooking rice)
- Rinse rice under cold water

Sauté onions and carrots
On medium/high heat
~5 mins

Add cinnamon, prunes and cashews
~2 mins

25 mins

Add rice
~2 mins

Add orange juice with stock
Mix orange juice with stock so that you have 1.5 times the amount of rice (so in this case 600 ml)

Bring to boil, then reduce heat to simmer and cover with a lid until liquid is soaked up and rice is done
~15 mins

Cook Broccoli
Boil plenty of water, then add broccoli stems and some salt. After ~2 mins, add florets for 3-4 minutes. Then rinse under cold water to stop cooking process.

Bigger Picture

Action Plan Generation plays a key role in planning & executing complex tasks within the LangChain system.
