ChatUI is a robust front-end interface for chatbots, enhancing user interactions with its intuitive design. It incorporates three dedicated tabs: PDF, website, and database functionalities, extending the chatbot's versatility. The PDF tab enables interaction with PDF documents, the website tab allows website data processing, and the database tab facilitates interaction with various databases.

Industrial Use Case

ChatUI can revolutionize customer service and information management. In customer service, agents can use the website and PDF tabs to fetch relevant information swiftly, while the database tab aids in managing customer information, enhancing service personalization. For information management, the PDF and database tabs facilitate efficient document handling and data retrieval. Overall, ChatUI optimizes the chatbot's functionalities, making it an indispensable tool for efficient customer service and information management.
