CodePulse is an AI-powered chatbot designed to provide interactive coding tutorials. As a virtual coding mentor, it guides learners through coding tasks, provides feedback on their code, and answers specific coding queries. Trained on a vast range of coding resources, CodePulse offers programming knowledge in various languages, combines real-time assistance with constructive feedback, and enhances learning with intelligent question-answering capabilities.

**Industrial Use Case**

CodePulse is a transformative tool for online learning platforms and coding bootcamps. It can supplement traditional learning methods, offering personalized, on-demand learning experiences. Educational institutions can integrate CodePulse into their systems for self-study and practice, and coding bootcamps can leverage it for personalized tutoring. In essence, CodePulse redefines coding education by providing an accessible, interactive, and personalized learning experience for aspiring coders.
